AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1.   (Currently Amended)   A computer readable medium containing a program which implements the following procedure:

processing at a network server an HTTP path name generated at a client wherein said HTTP path name includes an identity of a container within said server and an identity of internal server data maintained with said container, wherein said internal server data provides access to network software data;

processing by an administrative module of said server said path name to generate said internal server data identified in said path name for subsequent transmission to said client;

and transmitting said internal server data to said client without network transport support.

2.   (Currently Amended)   A method for obtaining internal server data locally or remotely across a computer network comprising:

processing at a network server an HTTP path name generated at a client wherein said HTTP path name includes an identity of a container within said server and an identity

of said internal server data maintained with said container, wherein said internal server data

provides access to network software data;

processing by an administrative module of said server said path name to generate

said internal server data identified in said path name for subsequent transmission to said

client;

and transmitting said internal server data to said client without network transport

support.

3.   (Currently Amended)   A computer network comprising:

a streaming server including an admin module and at least one container, said

module having a protocol instruction set responsive to HTTP commands, said container

being adapted to serve internal server data for said server, wherein said internal server data

provides access to network software data;

a user device in communication with said server, said user device being operative to

transmit an URL to said server, said admin module in response to said URL being received

accessing said internal server data in said container and transmitting said internal server

data to said user device without network transport support.

4.   (Canceled)
